

The puppy will be examined by a licensed veterinarian, wormed, given the first in a required series of parvo-distemper vaccinations.

The Seller will provide an AKC limited (not for breeding) registration application to the buyer, and the puppy will be microchipped for identification.

The Buyer also agrees that within five (5) days of taking possession of the puppy he/she may have it examined by a licensed veterinarian. If that examination reveals the puppy has any significant medical problems (conditions that affect the life span or long-term health of the puppy, or that require major surgery or constant medication, not including accidents or communicable diseases that occur after the seller takes possession of the puppy), the buyer may return the puppy within three (3) days of the examination.

Upon receipt of the puppy, the seller will reimburse the purchase price within 10 days. If the buyer chooses to pay for treatment without returning the puppy, the seller is released from any obligation to reimburse the buyer.
